Many cancer treatments can permanently affect fertility. Fertility Preservation techniques are most effective when used before cancer treatment begins. Be your own advocate with your doctor. Refer your patient for a fertility preservation consultation in your area. Remember, there is hope. Advances in treatment and higher survival rates mean that planning for life and a family is now a reality.

- Get connected with a fertility preservation program that's closest to you
- Refer your patient for a fertility preservation consultation or procedure at a center near you.
- Receive the latest information from experts in the field
- Access resources, tools, and support
