What do I do now?

5 Questions to Ask Your Doctor

1. How is cancer affecting my health right now?

2. How quickly do I need to start treatment?

3. Will my cancer or its treatments affect my ability to have children?

4. What are my fertility options?

5. Can I have my own biological children after cancer?

How Does Cancer Affect My Ability to Have Children?

Each year 135,000 people under age 45 are diagnosed with cancer.

Life-saving cancer treatments may cause infertility.

What can you do to preserve your fertility?
Questions & Answers

What is Oncofertility?
Oncofertility is a clinical field dedicated to providing fertility options for cancer patients. We bring cancer and fertility experts together to serve patients interested in preserving their ability to have biological children.

How does cancer affect my fertility?
Cancer treatments, such as chemotherapy, radiation, or surgery can be life-saving but may harm your ability to have children by causing damage to ovaries, testes, or other organs.

How can I preserve my fertility?
Each patient is unique. Fertility can be affected differently by each treatment. Your doctors can help determine which fertility preservation treatment is best for you.
